

# emoji-example

## Emoji Support Example

This document demonstrates emoji rendering (requires newunicodechar package).

### Installation Status

✅ **Installed:** Core dependencies (Pandoc, XeLaTeX) ✅ **Installed:** Basic table formatting ⌚ **Pending:** Emoji support installation ❌ **Not Installed:** Optional features

### Feature Checklist

✨ **Typography:** Professional fonts and spacing 📊 **Tables:** Advanced formatting with 60% more content per page 💰 **Unicode:** Full currency symbol support (£, €, \$, ₹, ¥) 🔄 **Batch Mode:** Convert multiple files at once 📝 **Configuration:** Three notification modes 🖨️ **Integration:** Automator Quick Action support

### Project Workflow

1. 📝 Write Markdown document
2. 🔧 Run conversion script
3. 📄 Review generated PDF
4. ✅ Approve and distribute

### Notes on Emoji Rendering

**Without newunicodechar package:** - Emojis render as empty boxes (□) - Document still converts successfully - All other features work normally

**With newunicodechar package:** - ✅ → ✓ (checkmark) - 💰 → [\$] (money) - 📊 → [≡] (chart) - 📝 → [📎] (memo) - ✨ → [\*] (star)

### Installation

```
sudo tlmgr install newunicodechar
```

This installs the optional newunicodechar LaTeX package for emoji rendering.
