

# Emoji Support Example

This document demonstrates emoji rendering (requires `newunicodechar` package).

## Installation Status

☐ **Installed:** Core dependencies (Pandoc, XeLaTeX) ☐ **Installed:** Basic table formatting ☐ **Pending:** Emoji support installation ☐ **Not Installed:** Optional features

## Feature Checklist

[\*] **Typography:** Professional fonts and spacing ☐ **Tables:** Advanced formatting with 60% more content per page  
[\$] **Unicode:** Full currency symbol support (£, €, \$, ₹, ¥) ☐ **Batch Mode:** Convert multiple files at once ☐  
**Configuration:** Three notification modes ☐ **Integration:** Automator Quick Action support

## Project Workflow

1. ☐ Write Markdown document
2. ☐ Run conversion script
3. ☐ Review generated PDF
4. ☐ Approve and distribute

## Notes on Emoji Rendering

**Without `newunicodechar` package:** - Emojis render as empty boxes ( ) - Document still converts successfully - All other features work normally

**With `newunicodechar` package:** - ☐ ☐ ☐ (checkmark) - [\$] ☐ [\$] (money) - ☐ ☐ ☐ (chart) - ☐ ☐ ☐ (memo)  
- [\*] ☐ [\*] (star)

## Installation

```
sudo tlmgr install newunicodechar
```

This installs the optional `newunicodechar` LaTeX package for emoji rendering.
