

# Emoji Support Example

This document demonstrates emoji rendering (requires `newunicodechar` package).

## Installation Status

✅ **Installed:** Core dependencies (Pandoc, XeLaTeX) ✅ **Installed:** Basic table formatting ⌚ **Pending:** Emoji support installation ❌ **Not Installed:** Optional features

## Feature Checklist

🌟 **Typography:** Professional fonts and spacing 🇮🇹 **Tables:** Advanced formatting with 60% more content per page 💰 **Unicode:** Full currency symbol support (£, €, \$, ₹, ¥) 🔄 **Batch Mode:** Convert multiple files at once ✍️ **Configuration:** Three notification modes 📢 **Integration:** Automator Quick Action support

## Project Workflow

1. ✍️ Write Markdown document
2. 🔧 Run conversion script
3. 📄 Review generated PDF
4. ✅ Approve and distribute

## Notes on Emoji Rendering

**Without `newunicodechar` package:** - Emojis render as empty boxes (□) - Document still converts successfully - All other features work normally

**With `newunicodechar` package:** - ✅ → ✓ (checkmark) - 💰 → [\$] (money) - 🇮🇹 → [≡] (chart) - ✍️ → [📝] (memo) - 🌟 → [\*] (star)

## Installation

```
sudo tlmgr install newunicodechar
```

This installs the optional `newunicodechar` LaTeX package for emoji rendering.
