

Emoji Support Example

This document demonstrates emoji rendering (requires `newunicodechar` package).

Installation Status

☐ **Installed:** Core dependencies (Pandoc, XeLaTeX) ☐ **Installed:** Basic table formatting ☐ **Pending:** Emoji support installation ☐ **Not Installed:** Optional features

Feature Checklist

[*] **Typography:** Professional fonts and spacing ☐ **Tables:** Advanced formatting with 60% more content per page
[\$] **Unicode:** Full currency symbol support (£, €, \$, ₹, ¥) ☐ **Batch Mode:** Convert multiple files at once ☐
Configuration: Three notification modes ☐ **Integration:** Automator Quick Action support

Project Workflow

1. ☐ Write Markdown document
2. ☐ Run conversion script
3. ☐ Review generated PDF
4. ☐ Approve and distribute

Notes on Emoji Rendering

Without `newunicodechar` package: - Emojis render as empty boxes (□) - Document still converts successfully - All other features work normally

With `newunicodechar` package: - ☐ ☐ ☐ (checkmark) - [\$] ☐ [\$] (money) - ☐ ☐ ☐ (chart) - ☐ ☐ ☐ (memo)
- [*] ☐ [*] (star)

Installation

```
sudo tlmgr install newunicodechar
```

This installs the optional `newunicodechar` LaTeX package for emoji rendering.
