Emoji Support Example

This document demonstrates emoji rendering (requires `newunicodechar` package).

Installation Status

✅ **Installed**: Core dependencies (Pandoc, XeLaTeX) ✅ **Installed**: Basic table formatting ⏳ **Pending**: Emoji support installation ❌ **Not Installed**: Optional features

Feature Checklist

✨ **Typography**: Professional fonts and spacing 📊 **Tables**: Advanced formatting with 60% more content per page 💰 **Unicode**: Full currency symbol support (£, €, $, ₹, ¥) 🔄 **Batch Mode**: Convert multiple files at once 📝 **Configuration**: Three notification modes 💻 **Integration**: Automator Quick Action support

Project Workflow

1. 📝 Write Markdown document
2. 🔧 Run conversion script
3. 📄 Review generated PDF
4. ✅ Approve and distribute

Notes on Emoji Rendering

Without `newunicodechar` **package:** - Emojis render as empty boxes (□) - Document still converts successfully - All other features work normally

With `newunicodechar` **package:** - ✅ → ✓ (checkmark) - 💰 → [$] (money) - 📊 → [≡] (chart) - 📝 → [✎] (memo) - ✨ → [*] (star)

Installation

```
sudo tlmgr install newunicodechar
```

This installs the optional `newunicodechar` LaTeX package for emoji rendering.
